

Lab – 8

Divya Rana

22cs2028

Q1. Develop a currency converter application that allows users to input an amount in one currency and convert it to another. For the sake of this challenge, you can use a hard-coded exchange rate. Take advantage of React state and event handlers to manage the input and conversion calculations.

Q2. Create a stopwatch application through which users can start, pause and reset the timer.

Use React state, event handlers and the `setTimeout` or `setInterval` functions to manage the timer's state and actions.
